

SECURITY PRODUCTS, SOLUTIONS AND SERVICES FOR BUSINESS

Kaspersky Endpoint Security for Business

Harnessing the expertise of the world’s best threat intelligence ecosystem, Kaspersky Endpoint Security for Business provides a tiered security approach based on a single integrated platform incorporating features including robust application, device and web control tools, data encryption, mobile endpoint security and MDM, and systems and patch management.

Everything is managed from one central console — Kaspersky Security Center.

Kaspersky Total Security for Business adds mail, web and collaboration server security, safeguarding your perimeters and securing your complete enterprise IT environment.

Kaspersky Targeted Solutions

Standalone solutions allowing Kaspersky Lab security to be applied to specific areas of your IT system.

Some solutions, like Kaspersky Security for Mobile, are also available as part of Kaspersky Endpoint Security for Business.

Others, like Kaspersky Security for Virtualization, are available purely as targeted solutions.

All are built on the same leading edge technologies and threat intelligence, and all physical, mobile and virtual endpoint security solutions are managed centrally through Kaspersky Security Center.

Kaspersky Security Intelligence Services and Enterprise Solutions

Leveraging Kaspersky’s threat intelligence, technical expertise, data and training skills to boost the security of your brand, your organisation and your employees

Enterprise Solutions address security issues for specific industries and infrastructures, and specific forms of attack like Distributed Denial of Service (DDoS).

Kaspersky Small Office Security

World-class protection made easy for very small businesses.

Maintenance and Service Agreements

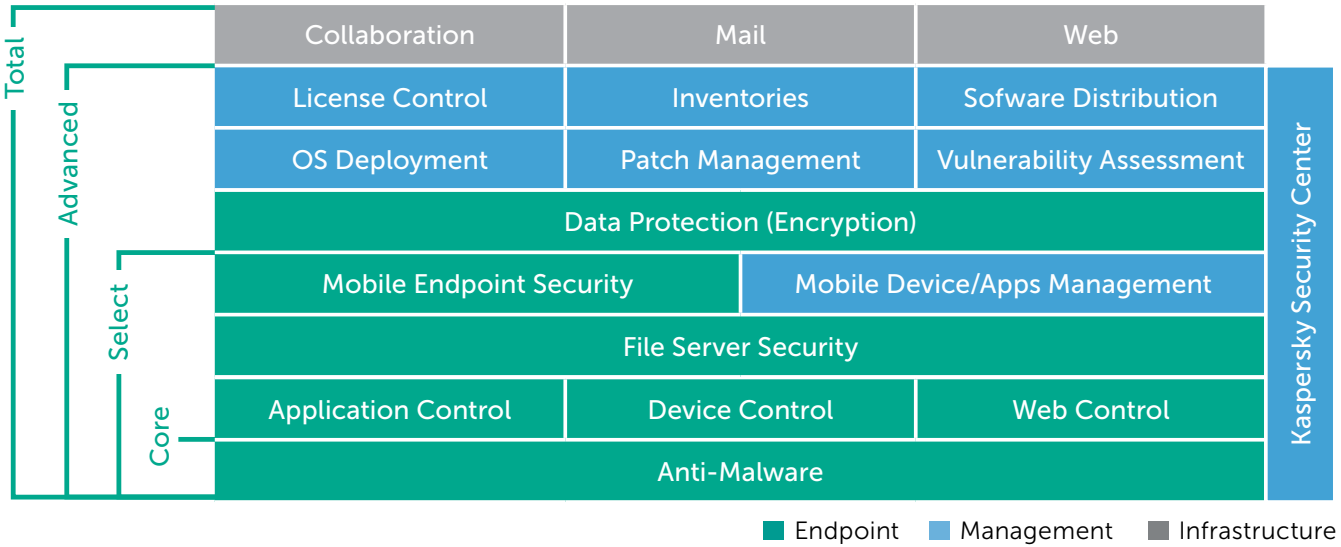

A range of support options for your Kaspersky security solution.

ABOUT KASPERSKY ENDPOINT SECURITY FOR BUSINESS

Kaspersky Endpoint Security for Business offers a complete security solution, designed by the world’s leading security experts. The deepest, most forward-looking protection, efficient performance and straightforward management build through progressive tiers to fully secure your business.

All components have been designed and built in-house to mesh together into a single security platform geared to your business needs. The result is a stable, integrated solution with no gaps, no compatibility issues and no additional workload as your security builds.

Administrators can see, control and protect their IT environment with Kaspersky Endpoint Security for Business. Tools and technologies are uniquely balanced across progressive tiers to meet your evolving security and IT needs. Kaspersky can make your job easier.

Kaspersky boasts a comprehensive list of technologies — all working together from the same codebase and further assisted by the cloud-based Kaspersky Security Network — to give our customers the world-class protection they need.

In short, we’ve delivered the industry’s first Security Platform, built from the ground up, making it easy for the administrator to see, control and protect your world.

KASPERSKY ENDPOINT SECURITY FOR BUSINESS

Powerful multi-layered protection against known, unknown and advanced threats, designed and built by the industry's leading security experts. Kaspersky Endpoint Security for Business, backed by world-renowned threat intelligence, provides unequalled IT security and control.

KASPERSKY ENDPOINT SECURITY FOR BUSINESS — CORE

Best-in-class anti-malware protection — the foundation of the Kaspersky Lab security platform

Kaspersky Lab's multi-layered protection technologies are developed in-house by people passionate about security. The result, independent tests confirm, is the most powerful and effective security solution in the industry — there is no better protection for your organization.

Protection from Known, Unknown and Advanced Threats — unique, sophisticated technologies identify and eliminate existing and emerging threats.

Automatic Exploit Prevention — proactively targets and identifies unknown and advanced threats.

Cloud-Assisted Protection — using real-time information from the worldwide Kaspersky Security Network.

System Watcher — Provides a unique file-restore function should the system be impacted.

Host-based Intrusion Prevention System (HIPS) with Personal Firewall — HIPS restricts activities according to the application's trust level — supported by an application-level Personal Firewall, which restricts network activity.

KASPERSKY ENDPOINT SECURITY FOR BUSINESS — SELECT

Powerful, granular endpoint controls combined with proactive security and management for mobile devices and data

Application, web and device controls, including dynamic whitelisting supported by Kaspersky's unique in-house laboratory, add a further dimension to deep endpoint security. Corporate and employee owned (BYOD) mobile devices are also secured, and platforms are unified to be managed, together with all protected endpoints, through the Kaspersky Security Center console. File server protection ensures that infection cannot spread to secured endpoints through stored data.

ENDPOINT CONTROLS

Application Control with Dynamic Whitelisting — using real-time file reputations delivered by the Kaspersky Security Network, enables IT administrators to allow, block or regulate applications, including operating a 'Default Deny' whitelisting scenario in a live or test environment. Application Privilege Control and Vulnerability Scanning monitor applications and restrict those performing suspiciously.

Web Control — browsing policies can be created around pre-set or customizable categories, ensuring comprehensive oversight and administrative efficiency.

Device Control — granular data policies controlling the connection of removable storage and other peripheral devices can be set, scheduled and enforced, using masks for simultaneous deployment to multiple devices.

FILE SERVER SECURITY

Managed together with endpoint security through Kaspersky Security Center.

MOBILE SECURITY:

Powerful Security for Mobile Devices — advanced, proactive and cloud-assisted technologies combine to deliver multi-layered real-time mobile endpoint protection.

Web protection, anti-spam and anti-phishing components further increase device security.

Remote Anti-Theft — Lock, Wipe, Locate, SIM Watch, Alarm, Mugshot and Full or Selective Wipe all prevent unauthorized access to corporate data if a mobile device is lost or stolen. Administrator and end-user enablement, together with Google Cloud Management support, delivers quick activation if required.

Mobile Application Management (MAM) — Controls limit the user to running whitelisted applications, preventing the deployment of unwanted or unknown software. 'Application Wrapping' isolates corporate data on employee owned devices. Additional encryption or 'Selective Wipe' can be remotely enforced.

Mobile Device Management (MDM) — a unified interface for Microsoft® Exchange ActiveSync and iOS MDM devices with OTA (Over The Air) policy deployment. Samsung KNOX for Android™-based devices is also supported.

Self-Service Portal — allows self-registration of employee-owned approved devices onto the network with automatic installation of all required certificates and keys, and user/owner emergency activation of anti-theft features, reducing the IT administrative workload.

Kaspersky Endpoint Security for Business — SELECT also includes all components of the CORE tier.

KASPERSKY ENDPOINT SECURITY FOR BUSINESS — ADVANCED

Systems management tools optimize IT efficiency and security, while integrated encryption protects sensitive data

Automated patch management and OS image management, remote software distribution and SIEM integration all help to streamline administration, while hardware and software inventories and license management provide visibility and control. Integrated encryption technology adds a powerful layer of data protection.

SYSTEMS MANAGEMENT

Vulnerability and Patch Management — automated OS and application vulnerability detection and prioritization, combined with the rapid automated distribution of patches and updates.

Operating System Deployment — easy creation, storage and deployment of OS 'golden' images from a central location, including UEFI support.

Software Distribution and Troubleshooting — remote software deployment and application and OS update available on-demand or scheduled, including Wake-on-LAN support. Time-saving remote troubleshooting and efficient software distribution is supported through Multicast technology.

Hardware and Software Inventories and Licensing Management

— identification, visibility and control (including blocking), together with license usage management, provides insight into all software and hardware deployed across the environment, including removable devices. Software and hardware license management, guest device detection, privilege controls and access provisioning are also available.

SIEM Integration — support for IBM® QRadar and HP ArcSight SIEM systems.

Role Based Access Control (RBAC) — Administrative responsibilities can be assigned across complex networks, with console views customized according to assigned roles and rights.

ENCRYPTION

Powerful Data Protection — File/Folder (FLE) and Full Disk (FDE) encryption can be applied to endpoints. Support for "portable mode" ensures encryption administration across devices leaving administrative domains.

Flexible User Login — Pre-boot authentication (PBA) for added security includes optional 'single sign-on' for user transparency. 2-factor or token based authentication is also available.

Integrated Policy Creation — Unique integration of encryption with application and device controls provides an additional layer of enhanced security and administrative ease.

Kaspersky Endpoint Security for Business — ADVANCED also includes all components of the SELECT and CORE tiers.

KASPERSKY TOTAL SECURITY FOR BUSINESS

Organizations who demand comprehensive security for their entire IT environment choose Kaspersky Total Security for Business

Kaspersky Total Security for Business delivers the most complete platform of protection and management offered in the industry today. Kaspersky Total Security for Business secures every layer of your network and includes powerful configuration tools to ensure your users are productive and free from the threat of malware, regardless of device or location.

MAIL SERVER SECURITY

Effectively prevents email based malware threats, phishing attacks and spam using cloud-based, real-time updates for exceptional capture rates and minimal false positives. Anti-malware protection for IBM® Domino® is also included. DLP functionality for Microsoft Exchange is available separately.

SECURITY FOR INTERNET GATEWAYS

Ensures secure Internet access across the organization by automatically removing malicious and potentially hostile programs in HTTP(S) / FTP / SMTP and POP3 traffic.

COLLABORATION SECURITY

Defends SharePoint® servers and farms against all forms of malware. DLP functionality for Sharepoint, available separately, provides content and file filtering capabilities identify confidential data and protect against data leakage.

Kaspersky Total Security for Business also includes all components of the ADVANCED, SELECT and CORE tiers.

KASPERSKY SECURITY FOR FILE SERVER

Kaspersky Security for File Server provides cost-effective, reliable, scalable security for shared file storage with no discernable impact on system performance.

HIGHLIGHTS

POWERFUL ANTI-MALWARE PROTECTION
Kaspersky's award-winning anti-malware engine provides powerful server protection, blocking even the latest known and potential malware threats from entering the local network via malicious or dangerous programs.

HIGH PERFORMANCE AND RELIABILITY
You can be confident that Kaspersky Security for File Server will not noticeably slow your system down or interfere with business operations under heavy network load conditions.

MULTIPLE PLATFORM SUPPORT
A single, effective security solution for heterogeneous server networks, supporting the latest platforms and servers including terminal, cluster and virtual servers, with no compatibility issues.

POWERFUL MANAGEMENT AND REPORTING
Effective, user-friendly management tools, information about server protection status, flexible time settings for scans and an extensive reporting system provide efficient control of file server security, all helping reduce the cost of ownership.

FEATURES

- **Real-time anti-malware protection** for file servers running the latest versions of Windows® (including Windows Server® 2012/R2), Linux® and FreeBSD (both including Samba).
- **Citrix and Microsoft® terminal server protection.**
- **Fully supports cluster servers.**
- **Scalability** — supporting and securing even the most complex heterogeneous infrastructures with ease.
- **Reliability, stability and high fault tolerance.**
- **Optimized, intelligent scan technology** including on-demand and scanning of critical system areas.
- **Trusted zones** help increase security performance while reducing resource levels needed for scanning.
- **Quarantine and back-up** of data prior to disinfection or deletion.
- **Isolation** of infected workstations.

- **Centralized installation, management and updates** with flexible configuration options.
- **Flexible incident response scenarios.**
- **Comprehensive reports** on network protection status.
- **Application status notification system.**
- **Support for Hierarchical Storage Management (HSM)** systems.
- **Proven Hyper-V and Xen Desktop support.**
- **VMware Ready.**
- **Support for ReFS.**

Kaspersky Security for File Server is included in Kaspersky Endpoint Security for Business — SELECT and ADVANCED, as well as Kaspersky Total Security for Business. It is also available to purchase separately as a Targeted Solution.
